Model: Y411355

Product: 1.5 Ton Low profile, ultra light jack

Description: A unique 100% alloy floor jack that combines a futuristic design with our widely known and respected TURBO LIFTER (fast to the load, fast with the load) pumping technology. Its solid rubber pad ensures optimal protection while lifting the vehicle. Thick frame side plates and a multiple reinforced lift arm result in maximum strength and safety.

Features:	Benefits:
Low Profile Design	The low-profile design of this trolley jack allows it to slide under vehicles with limited ground clearance, such as sports cars or lowered vehicles. This makes it suitable for a wide range of vehicles.
Compact design	Small and easy to fit in the back of your vehicle as the jack does not take up much space.
2 speed lowering	2 drain speeds for greater safety, it is possible to lower the loaded jack very precisely and without any risk.
Turbo lifter	The jack can raise a vehicle very quickly and with very little physical effort, thanks to its turbo lifting power - all that's required is a few up and down motions of the jack handle.
Easy and simple to use	You just wheel it under your vehicle to the safest lifting point and then activate the lifting mechanism by pumping the handle socket with an attached handle. A hydraulic jack is easy to use and requires little physical effort to produce the tremendous lifting force that can safely raise your car off the ground.
Safe and Stable	The jack is designed for safe car lifting and stability. Stability is gained through the base size of the trolley. The wheels can also help keep the jack in the correct position to prevent it from leaning over the way some other jacks do. You must never, however, rely on a trolley jack only to keep a vehicle raised to work under it - these are for raising only, not bearing weight for a period of time. You should always place jack stands below a vehicle after lifting it off the ground. It's also crucial to ensure these jacks are only used on a solid and level surface.
Solid and Robust	The trolley jack is a heavy-duty workhorse that is built to last. The solid build of the racing jack means it can stand up to all the bumps and knocks it will encounter in any automotive repair garage or other location.
The pump piston is located at an angle of 45°	So that the full stroke of the pump movement is always used.

Premium European design	Recognizing the demand for high performance work shop products, Winntec sourced the best quality components and developed a range of premium work shop equipment which offers excellent value for money. Choosing Winntec means choosing certainty in terms of quality, functionality and after sales service. It's the experience which makes the difference !
1.5 Ton Capacity	The 1.5-ton lifting capacity means it can lift vehicles weighing up to 1.5 tons, which is typically sufficient for most passenger cars and some smaller SUVs.
Quick Lifting	Equipped with a rapid lifting mechanism, allowing you to reach the desired height quickly, reducing the time it takes to lift the vehicle
Safety features	Safety valves to prevent overloading and a sturdy construction to ensure stability and safety while working under the vehicle.
Swivel casters	Swivel casters on the jack's wheels make it easy to maneuver the jack into the right position under the vehicle.
Long handle	A long handle provides extra leverage for easier lifting and lowering of the vehicle. Some models even have a padded handle for added comfort.
Built-in pump	The jack has a built-in hydraulic pump or piston for easy lifting and lowering operations.
	Versatile Use: This trolley jack can be used for various automotive tasks, such as changing tyres, brake jobs, suspension work, and more.
	Space-Saving: The low-profile design and lightweight nature of the jack make it easy to store in your garage or trunk without taking up much space.
	Emergency Tool: Having a compact and lightweight trolley jack in your vehicle can be a lifesaver in case of a flat tyre or roadside emergency. It allows you to change a tyre quickly and get back on the road.
	Efficiency: The quick lifting mechanism and ease of use make automotive maintenance and repairs more efficient, saving you time and effort.
	Safety: Properly using a trolley jack ensures a safe working environment when working under a vehicle. The built-in safety features help prevent accidents and injuries.
	Durable: When properly maintained, a high-quality trolley jack can last for many years, providing reliable service for multiple automotive tasks.
	Professional Look: For auto enthusiasts and professionals, a low-profile trolley jack can add a professional touch to your garage or workshop.
Training available	Technicians can be professionally trained to use the equipment and get the maximum benefit from it.

1 year warranty	The equipment will be repaired if there are any factory faults. The equipment will be repaired if there are any factory faults.
Spares available	Should you have a breakdown you will not have to wait for your equipment to be repaired. If there is anything we don't have, we fly it in directly from the Suppliers.

Important notice!

- Trolley jacks are not a long-term support to lift vehicles.
- Jack stands/trestles to be used with trolley jacks as they are designed to hold weight of the vehicle for extended periods - as per SANS71 & Driven Machinery ACT.
- The load must be supported by a load bearing structure.

Technical information	
Min height	90mm
Max height	360mm
Width	236mm
Product weight	14kg
Packaging dimensions	600*280*170 mm
Packaging weight	16 kg
